

Scigeniq™ QMS

Scigeniq QMS is a complete Quality Management System for Pharma and Life Sciences companies. With complete, end-to-end workflows, it enables the effective management of quality processes from Deviation to Corrective Action and right through the issuance of a Change Control.

Scigeniq QMS is cloud-based and fully compliant with all regulatory requirements for the electronic management of quality documents and processes.

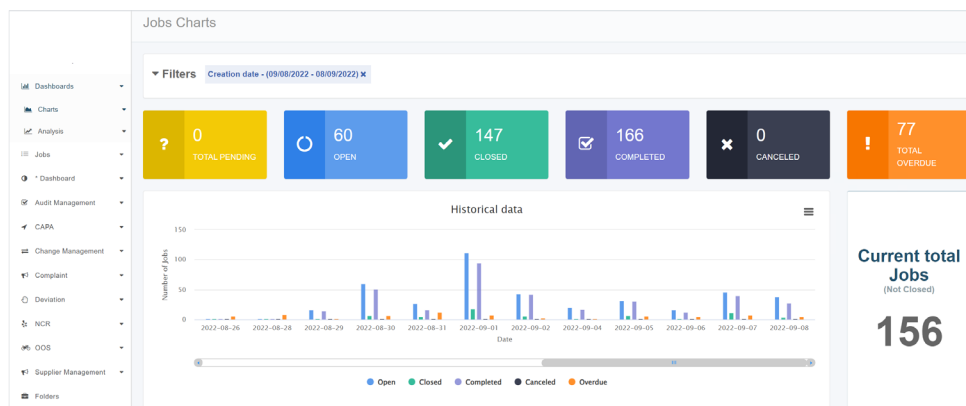

A Modern QMS Designed for Pharma

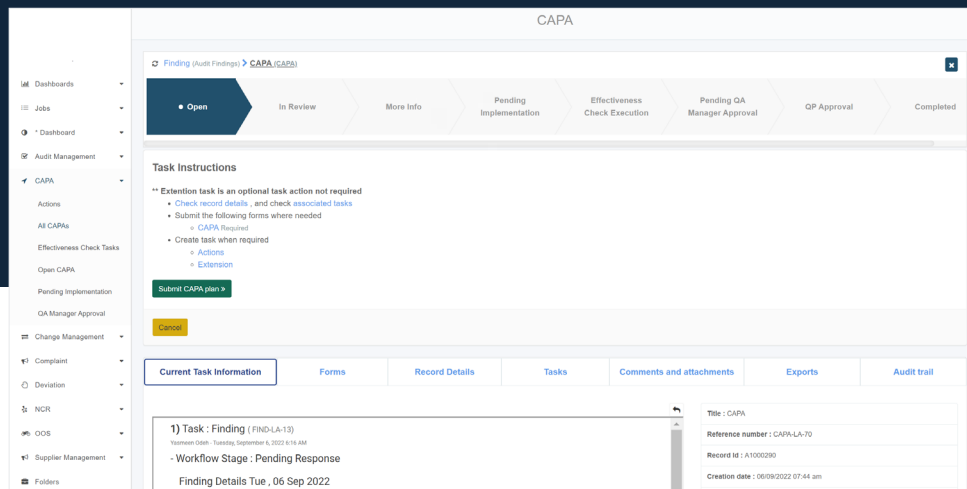

Scigeniq QMS was built using modern technologies with a contemporary user experience, the ability to rapidly configure the application to each organization's needs, and workflows that address regulatory requirements and enforce proven best practices. It is a member of the Scigeniq family of applications that enable much faster implementation and ready adoption by users.

A Complete Quality Management System

Scigeniq QMS includes all the capabilities required to manage every aspect of the quality process:

- Deviation Handling. Record any unexpected event and engage all key stakeholders in the organization through a system notification.
- Audit Management. Ensure that proper audit planning and execution are recorded, and all steps are tracked.
- Change Control. Record and assess all changes from regulatory and quality perspectives.
- Supplier Management. Plan, manage and record the qualification of supplier's task assignments and tracking.
- CAPA. Record Corrective and Preventive Actions and ensure all actions are properly assigned and responsible team members notified.
- Out-of-Specification. Track each investigation from start through a compliant root-cause investigation.
- Non-Conformance. Record and track any instance in which a product has not conformed to standards.

Part of the Scigeniq Family of Applications

Scigeniq QMS is part of the Scigeniq family of applications for managing quality and compliance at life sciences companies. Each application shares our commitment to delivering quality management applications that are much easier to use, much faster to deploy, and designed for mid-sized life sciences companies in the Middle East, Africa, and South America.

Our family of applications includes solutions for managing quality processes from deviation to CAPA right through change control, tracking training activities, and coordinating regulatory submissions and product life cycle management.

More Than Software

The Scigeniq team has deep, unparalleled knowledge of the pharmaceutical industry and quality processes. This expertise is embedded directly into our applications and provided to every customer throughout the implementation process.

That means that our years of expertise are available to you at every step of the process, and proven best practices are “baked into” our applications.

Scigeniq: We Deliver Technology-Based Advantages to our Customers

Scigeniq provides software and expertise to life sciences companies in the Middle East, Africa, South America, and around the world to accelerate their digital transformation. We provide expertise, guidance, and software solutions to our customers, which allows them to rapidly gain new capabilities and advantages based on proven technologies.
